## **CURRICULUM**

## CURRICULUM

Topic	Content	Time
Anatomy 1	<ul> <li>High-resolution MRI visualization of vestibular structures</li> <li>Microscopic anatomy and pathology of presbyvestibulopathy</li> <li>Structural and mechanistic insights into BPPV</li> <li>Integration of anatomical knowledge with clinical relevance for vestibular disorders</li> </ul>	50 min
Anatomy 2	<ul> <li>Detailed exploration of the vascular anatomy of the peripheral and central vestibular system</li> <li>Role of the basilar artery, AICA, PICA, and SCA in vestibular and cerebral blood supply</li> <li>Clinical features and differentiation of AICA and labyrinth infarctions</li> <li>Overview of carotid sinus syndrome and vertebral artery lesions</li> </ul>	50 min
Physiology 1	<ul> <li>and otolith organs as primary motion sensors</li> <li>Interaction between semicircular canals and extraocular muscles, illustrated to explain nystagmus patterns</li> <li>Physiological basis and clinical relevance of the translation-vestibulo-ocular reflex</li> <li>Mechanisms and diagnostic importance of the ocular tilt reaction in vestibular disorders</li> </ul>	45 min
Pathology 1	<ul> <li>Detailed understanding of inner ear nerve supply and reasons for superior vestibular nerve vulnerability in neuritis vestibularis</li> <li>Exploration of the link between Ménière's disease and endolymphatic hydrops, including characteristic nystagmus and differential diagnosis</li> <li>Insight into the causes, symptoms, diagnostic criteria, and treatment options for SCD syndrome</li> </ul>	45 min

Pathology 2	<ul> <li>Detailed exploration of CANVAS (Cerebellar Ataxia, Neuropathy, and Vestibular Areflexia Syndrome) and vestibular paroxysmia</li> <li>Pathophysiology, diagnostic procedures, and treatment strategies for CANVAS</li> <li>Differentiation of CANVAS from other neurological and vestibular disorders</li> <li>Clinical features, diagnosis, and management of vestibular paroxysmia caused by 8th cranial nerve compression</li> </ul>	50 min
Pathology 3	<ul> <li>Comprehensive overview of Mal de Débarquement Syndrome (MdDS)</li> <li>Current theories on the causes and challenges of diagnoses and treatment</li> <li>Recognition of characteristic symptoms and associated clinical findings</li> <li>Diagnostic criteria and differentiation from other vestibular and neurological disorders</li> <li>Review of current treatment methods and evaluation of supporting scientific evidence</li> </ul>	60 min
Balance 1	<ul> <li>Exploration of the balance system's adaptive and compensatory mechanisms</li> <li>Understanding of compensation processes following vestibular loss</li> <li>Insight into how the brain and body adapt to altered balance conditions</li> <li>Application of adaptive mechanisms in therapy to enhance and accelerate patient recovery</li> </ul>	70 min

Balance 2	<ul> <li>Overview of key clinical tests for assessing static balance</li> <li>Application and interpretation of the Five Times Sit to Stand Test for evaluating leg strength and balance control</li> <li>Use of the Functional Reach Test to measure dynamic stability during forward reach</li> <li>Assessment of single-leg stability with the Single Leg Stance Test to identify early balance impairments</li> <li>Evaluation of balance and postural stability using the Tandem Romberg Test</li> </ul>	35 min
Balance 3	<ul> <li>Training in key clinical tests for assessing dynamic balance</li> <li>Application of the Gait Speed Test as a reliable measure and predictor of falls, mobility limitations, and overall health</li> <li>Use of the Gait Disorientation Test to evaluate balance and spatial orientation</li> <li>Implementation of the Four Square Step Test to assess coordination, agility, and the ability to manage rapid directional changes</li> <li>Comprehensive evaluation of balance and postural control using the Mini-BESTest</li> </ul>	45 min
Oculomotor exam 1	<ul> <li>Introduction to the fundamentals of oculomotor examination and eye movement assessment</li> <li>Use of visual inspection to identify potential oculomotor dysfunctions</li> <li>Evaluation of eye position and motility to detect abnormalities and assess muscle function</li> <li>Application of Cover/Uncover Test, and Alternate Cover Tests to diagnose strabismus and ocular misalignments</li> </ul>	60 min

Oculomotor exam 2	<ul> <li>Evaluation of gaze-holding function to assess fixation stability and detect central disorders</li> <li>Identification of gaze-evoked nystagmus as an indicator of vestibular or central dysfunction</li> <li>Analysis of rebound nystagmus and its diagnostic relevance</li> <li>Examination of vestibulo-ocular reflex fixation suppression to evaluate vestibulo-visual interaction and central control mechanisms</li> </ul>	35 min
Spontaneous nystag- mus 1	<ul> <li>Identification and interpretation of gaze-evoked and rebound nystagmus in central disorders</li> <li>Assessment of headshaking-induced nystagmus as an indicator of vestibular dysfunction</li> <li>Evaluation of vibration-induced nystagmus to detect specific vestibular pathologies</li> </ul>	45 min
Spontaneous nystag- mus 2	<ul> <li>Evaluation of pressure-induced nystagmus (Hennebert's sign) and its associated pathologies</li> <li>Assessment of Valsalva-induced nystagmus and its occurrence in specific vestibular disorders</li> <li>Analysis of sound-induced nystagmus (Tullio phenomenon) and related vestibular conditions</li> <li>Understanding of hyperventilation-induced nystagmus and its diagnostic implications</li> </ul>	30 min
BPPV 1	<ul> <li>Understanding of the Tumarkin-like phenomenon and its occurrence after repositioning maneuvers</li> <li>Application and evaluation of the Loaded Dix-Hallpike Test</li> <li>Detailed analysis of posterior canal BPPV maneuvers, including the Li maneuver and Semont Plus, compared with the Epley maneuver for effectiveness and patient comfort</li> <li>Examination of the Modified Yacovino maneuver and its theoretical and practical benefits in BPPV treatment</li> </ul>	35 min

		T
BPPV 2	<ul> <li>Techniques for accurate lateralization of the affected side in horizontal canal BPPV</li> <li>Application and interpretation of the Supine Roll Test and Bow and Lean Test</li> <li>Observation and analysis of nystagmus to distinguish between BPPV variants</li> <li>Understanding of 'pseudo'-spontaneous nystagmus, its mechanisms and diagnostic value</li> </ul>	35 min
BPPV 3	<ul> <li>Clear differentiation between central positional nystagmus and BPPV in clinical practice</li> <li>Understanding of the characteristics and frequency of central positional nystagmus</li> <li>Video-based case examples with detailed explanations to enhance diagnostic accuracy and practical understanding</li> </ul>	35 min
BPPV 4	<ul> <li>Detailed analysis of apogeotropic posterior canal BPPV</li> <li>Understanding of short-arm posterior canal BPPV, its diagnostic challenges, and therapeutic approaches</li> <li>Examination of sitting-up vertigo</li> <li>Discussion of Type II ("subjective") BPPV</li> </ul>	65 min
BPPV 5	<ul> <li>Understanding of the light cupula mechanism</li> <li>Development of effective treatment strategies for managing light cupula-related symptoms</li> <li>Comprehensive insight into canalith jam, including its pathophysiology, diagnostic indicators, and targeted therapeutic maneuvers</li> </ul>	40 min
	TOTAL time	13 h 50 min
